

WeIntern Summer Internship Program 2025

Task 2 - Prompt Engineering

HANNAH JOHNSON

CATEGORY 1: MARKETING

Prompt 1 - Instagram Caption

GOAL: Develop an Instagram caption for an AI productivity app aimed at students

TECHNIQUE: Zero-shot

PROMPT: You are a digital marketing specialist that focuses on content creation for Gen Z audiences.

TASK: Now craft a strong Instagram caption for a new AI productivity app intended for college students.

CONTEXT: The application aids students in managing their study routines, summarizing notes, and setting intelligent reminders. It is entirely free to download on both iOS and Android devices.

FORMAT: Also make it dynamic and relatable for the students. Less than 150 words. Friendly tone. Close with precisely 5 hashtags.

OUTPUT -

Study smarter, not harder  

Meet the AI productivity app built for college life — organize your study schedule, turn messy lecture notes into quick summaries, and never miss a deadline again. From exam prep to assignment reminders, everything you need to stay on top of your semester is right in your pocket.

Best part? It's completely free on iOS & Android 
Your academic glow-up starts now.

#StudentProductivity #AIForStudents #StudySmart #CollegeLife #ProductivityApp

Prompt 2 - 3-Email Welcome Sequence

GOAL: Develop a nurturing email sequence for new SaaS trial users

TECHNIQUE: Chain-of-Thought / COT

PROMPT: You are an expert in SaaS email marketing with 5 years' experience working in the B2B software sector.

TASK: Now create a 3-email welcome sequence aimed at those who have just signed up for a trial of "FlowDesk," a project management solution.

CONTEXT: FlowDesk should be a comprehensive solution that assists small teams in handling projects. The trial lasts for 7 days and the users should be nurtured to eventually turn into subscribers.

Think step by step:

Email 1 (day 0): Introduce and guide

Email 2 (day 3): Focus on your USP

Email 3 (day 6): Convert to subscription

FORMAT: For each email provided with a subject line, Preview text (1 sentence), and body content (less than 200 words).

OUTPUT-

Here's a structured 3-email welcome sequence for new FlowDesk trial users.

Hi there,

Welcome to FlowDesk! 🎉 We're excited to help your team simplify project management and stay on track without the chaos of endless spreadsheets and scattered messages.

Getting started is easy:

- ✓ Create your first project
- ✓ Invite your teammates
- ✓ Set deadlines and assign tasks
- ✓ Track progress in one shared workspace

FlowDesk is designed for small teams that want to move faster, collaborate better, and spend less time managing work.

Your 7-day free trial starts today, so now's the perfect time to explore features like task boards, team collaboration, automated reminders, and real-time updates.

Need help? Our support team is always here for you.

Let's make teamwork feel effortless.

— The FlowDesk Team

Preview text: Your FlowDesk free trial starts now — here's how to get set up in minutes.

Hi there,

By now, you've had a chance to explore FlowDesk — but here's what makes teams stick with us.

Unlike complicated project management tools built for huge enterprises, FlowDesk is designed specifically for small teams that need simplicity *and* productivity.

Here's what users love most:

- Easy-to-use dashboards
- Smart deadline reminders
- Seamless team collaboration
- Clear project visibility in real time
- Faster workflows with less admin work

No steep learning curve. No unnecessary complexity. Just a clean workspace that helps your team stay aligned and get more done.

Teams using FlowDesk report fewer missed deadlines and smoother communication within days of getting started.

Keep exploring during your free trial — your next productive workflow might be one click away.

— The FlowDesk Team

Preview text: Discover the features helping small teams work faster and smarter every day.

Hi there,

Your free FlowDesk trial ends tomorrow — and we'd love to keep your team moving forward without interruptions.

Over the past few days, you've seen how FlowDesk can help organize projects, improve collaboration, and simplify day-to-day work. Now it's time to unlock the full experience.

When you subscribe, you'll continue to enjoy:

- Unlimited project tracking
- Team collaboration tools
- Automated reminders & updates
- Priority support
- Access from anywhere

Don't lose the workflows and progress you've already built. Upgrade today and keep your projects running smoothly.

👉 Subscribe now and continue building momentum with FlowDesk.

Thanks for trying FlowDesk — we're excited to grow with your team.

— The FlowDesk Team

Preview text: Your trial is almost over — upgrade now to keep your projects and workflows active.

Prompt 3 - 10 Low-Cost Marketing Tactics

GOAL: Come up with practical growth tactics for a startup with virtually no budget.

TECHNIQUE: Zero-shot

PROMPT: You are a growth hacker who has grown 3 startups from scratch to having 10,000 users with very little budget.

TASK: Provide 10 low-cost marketing tactics for an Indian EdTech startup offering programming courses for high school kids.

CONTEXT: A startup's monthly budget for marketing can be at most 50,000 Rupees. It has a working site and a free course for beginners. The target group consists of teenagers aged 14-18 and their parents.

FORMAT: Numbered list 1-10. Each tactic must contain-

Name of tactic (in bold font)

One sentence description on how to execute the tactic

Estimated monthly cost (Rupees)

OUTPUT -

1. **Instagram Reels & Meme Marketing**

Create short coding tips, relatable student memes, "day in the life of a coder" clips, and AI/programming trends to attract teenagers organically through Instagram Reels and YouTube Shorts.

Estimated monthly cost: ₹5,000–₹8,000

2. **Free Coding Challenges & Certificates**

Run weekly beginner-friendly coding contests with downloadable certificates to encourage signups and social sharing among students.

Estimated monthly cost: ₹2,000–₹5,000

3. **School WhatsApp Community Outreach**

Partner with school student groups, tuition centers, and parent WhatsApp communities to promote the free beginner course directly.

Estimated monthly cost: ₹1,000–₹3,000

4. **Referral Rewards Program**

Offer rewards like Amazon vouchers, premium classes, or coding mentorship sessions when students refer friends who sign up.

Estimated monthly cost: ₹5,000–₹10,000

5. **Parent-Focused Webinars**

Host free Zoom webinars explaining future tech careers, AI opportunities, and why coding skills matter for teenagers.

Estimated monthly cost: ₹3,000–₹6,000

6. **YouTube Tutorials for Beginners**

Upload free beginner programming tutorials optimized for search terms like “Python for school students” or “coding for beginners in India.”

Estimated monthly cost: ₹5,000–₹8,000

7. **Micro-Influencer Collaborations**

Collaborate with student creators, coding mentors, and education influencers with small but engaged Indian audiences.

Estimated monthly cost: ₹8,000–₹15,000

8. **Campus Ambassador Program**

Recruit school students as ambassadors who promote the platform in exchange for certificates, internships, and rewards.

Estimated monthly cost: ₹3,000–₹7,000

9. **SEO Blog Content**

Publish blogs targeting keywords parents and students search for, such as “best coding courses for teens” or “how to start coding after 10th grade.”

Estimated monthly cost: ₹4,000–₹7,000

10. **Free Project Showcase Events**

Conduct monthly online demo days where students present apps, games, or AI projects to parents and peers, creating word-of-mouth growth.

Estimated monthly cost: ₹4,000–₹6,000

Prompt 4 - Brand Tagline and it's story

GOAL: Craft a brand identity for an AI-based resume builder for fresh graduates

TECHNIQUE: Zero-shot

PROMPT: You work as a senior brand strategist at a leading creative firm with 10 years of experience in developing startup brands.

TASK: Create a tagline and a brand story for an AI-based resume builder known as "HireReady."

CONTEXT: HireReady aims to help young graduates in India build a resume to get hired for their first job. They may have impressive qualities and abilities but are unable to put their experiences, internship, or any project on paper. It helps users build a perfect resume through an easy, quick, and AI-driven process.

FORMAT:

Tagline: Less than 8 words. Must be powerful & motivating.

Brand Story: In 3 sentences. Must be inspiring & human-like.

OUTPUT -

Tagline:

Build Confidence. Get HireReady.

Brand Story:

Every graduate has potential, but not everyone knows how to showcase it on paper. HireReady uses AI to turn internships, projects, skills, and ambitions into resumes that truly reflect who you are and what you can achieve. We believe your first opportunity should be earned by your talent — not limited by your resume-writing skills.

Prompt 5 - 1-Week LinkedIn Content Calendar

GOAL: Design a week of B2B content strategy for a start-up

TECHNIQUE: Few-shot

PROMPT: You are a B2B content strategist. Here is an example of a high-performance LinkedIn post for a SaaS company: "We saved one customer 40 hours per month using just one automation here is precisely what we did -"

TASK: Create a 1-week LinkedIn content calendar for "TaskMind" – an AI-driven B2B start-up that offers task assignment automation and performance tracking to operation managers at firms employing between 50-200 people.

CONTEXT: TaskMind assists operations managers to automate mundane task management, and use artificial intelligence dashboards to track their performance.

FORMAT: Provide a content calendar in a tabular format consisting of the following columns:

Day | Content Post Theme | Content Format (Text/Poll/Carousel/Video/Document) | First Sentence | Best Posting Time

OUTPUT -

Day	Content Post Theme	Content Format	First Sentence	Best Posting Time
Monday	Time Saved Through Automation	Text	“One operations team reduced manual task allocation by 70% in just 2 weeks — here’s how.”	9:00 AM
Tuesday	Operations Manager Pain Points	Poll	“What wastes the most time in your operations workflow right now?”	12:00 PM
Wednesday	AI Dashboard Walkthrough	Carousel	“Most managers track performance too late — AI changes that completely.”	10:00 AM
Thursday	Customer Success Story	Document	“A 120-person company used TaskMind to eliminate missed deadlines across 5 departments.”	11:00 AM
Friday	Behind-the-Scenes/ Product Insight	Video	“Here’s what actually happens when AI assigns tasks smarter than spreadsheets.”	2:00 PM
Saturday	Productivity & Leadership Tips	Text	“High-performing operations teams don’t work harder — they remove bottlenecks faster.”	10:30 AM
Sunday	Engagement & Community Building	Carousel	“5 signs your team has already outgrown manual task management.”	6:00 PM

CATEGORY 2: FINANCE

Prompt 6 - Budget for a Startup

GOAL: To develop a realistic budget for a startup using only seed money

TECHNIQUE: Zero-shot

PROMPT: You are a business coach specializing in providing financial advice to startups. So far, you have successfully managed over 30 young tech companies' budgets.

TASK: Prepare a budget plan for a team of five people working on a mobile application with 50,000 rupees of seed money available to last six months.

CONTEXT: There are two part-time developers, one part-time designer, and two co-founders with meager salaries. They operate remotely from home.

FORMAT: To show your calculations, please use the following template:

Category | Monthly amount (rupees) | Six-month total | Percentage of overall budget

Categories should be: Salaries, Tools & software, Marketing & Advertising, Cloud Hosting & Services, Legal/Admin, Emergency Fund.

Following the above information, write three sentences of financial advice.

OUTPUT -

Category	Monthly Amount (₹)	Six-Month Total (₹)	Percentage of Overall Budget
Salaries	4,000	24,000	48%
Tools & Software	1,000	6,000	12%
Marketing & Advertising	1,200	7,200	14.4%
Cloud Hosting &	700	4,200	8.4%

Services			
Legal/Admin	400	2,400	4.8%
Emergency Fund	1,033	6,198	12.4%
Total	8,333	49,998	100%

Financial Advice:

1. Keep salaries minimal during the early stage and prioritize product development plus user acquisition.
2. Use free or student/startup plans for software tools, cloud hosting, and collaboration platforms whenever possible.
3. Maintain the emergency fund strictly for unexpected technical, legal, or operational expenses to avoid cash flow problems before generating revenue.

Prompt 7 - Venture Capital Risk and Opportunity Analysis

GOAL: Assess a startup idea from the standpoint of a financier

TECHNIQUE: Chain of Thought

PROMPT: You are a venture capitalist with experience in assessing more than 500 startup pitches and have made investments in 12 different businesses.

TASK: Conduct an analysis regarding the financial risks and opportunities associated with this startup concept: "A platform that utilizes artificial intelligence to automatically generate legally-compliant freelance contracts and invoices for independent workers."

CONTEXT: Perform a chain of thought in analyzing each risk and opportunity before answering.

FORMAT:

Title (in bold font)

Section 1 - 5 Financial Risks (Bullet Points)

Section 2 - 5 Financial Opportunities (Bullet Points)

two-sentence explanation

OUTPUT -

AI-Powered Freelance Contract & Invoice Platform — VC Risk and Opportunity Analysis

Section 1 – 5 Financial Risks

- **Legal Liability Risk**
If AI-generated contracts contain errors or fail to comply with regional laws, the startup could face lawsuits, refunds, or reputational damage that increases operational costs.
- **High Customer Acquisition Costs**
Freelancers are highly price-sensitive users, meaning the company may spend heavily on marketing and partnerships before achieving profitable customer retention.
- **Regulatory & Compliance Changes**
Contract and tax laws frequently change across countries, requiring constant legal updates and increasing ongoing maintenance expenses.
- **Competitive Market Pressure**
Established platforms offering invoicing, accounting, or legal templates may quickly integrate similar AI features, reducing pricing power and market differentiation.
- **Trust & Adoption Barriers**
Users may hesitate to rely on AI for legally binding documents, slowing adoption rates and extending the time needed to generate recurring revenue.

Section 2 – 5 Financial Opportunities

- **Growing Freelance Economy**
The global rise of remote work and freelancing creates a large and expanding customer base that regularly needs contracts and invoicing solutions.
- **Recurring Subscription Revenue**
The platform can generate stable monthly recurring income through SaaS subscriptions, premium templates, compliance updates, and automated billing tools.
- **Low Operational Delivery Costs**
Once the AI system and legal framework are established, serving additional customers becomes relatively inexpensive, improving scalability and profit margins.
- **Partnership & Integration Potential**
The startup could partner with freelancer marketplaces, payment gateways, banks, or tax software providers to accelerate growth and reduce acquisition costs.
- **Global Expansion Opportunities**
By adapting legal templates for different countries, the platform can expand internationally and unlock multiple revenue streams across diverse freelance markets.

This startup has strong commercial potential because it addresses a real administrative pain point for freelancers while leveraging scalable AI technology. However, long-term success will depend heavily on legal accuracy, user trust, and the company's ability to compete against larger SaaS ecosystems.

Prompt 8 - What is Burn Rate & Runway?

GOAL: Teach financial terms to an inexperienced entrepreneur

TECHNIQUE: Zero-shot

PROMPT: You are a CFO who focuses on mentoring novice startup founders with no financial background.

TASK: Teach burn rate and runway in the easiest manner possible.

CONTEXT: Your learner is a 27-year-old entrepreneur with a design background who has never taken a finance course before and feels anxious around any spreadsheet.

FORMAT:

1. Burn Rate definition in one sentence with zero jargon
2. Burn Rate formula
3. Runway definition in one sentence with zero jargon
4. Runway formula
5. Example based on: 1,20,000 Rupees in the account; spending 15,000 Rupees per month
6. One tip to stretch runway without raising more funds

OUTPUT -

1. Burn Rate Definition

Burn rate is the amount of money your startup spends every month to keep running.

2. Burn Rate Formula

Burn Rate = Total Monthly Expenses

3. Runway Definition

Runway is how long your business can survive before the money in the bank runs out.

4. Runway Formula

Runway = Money Available in Bank ÷ Monthly Burn Rate

5. Example

- Money in bank = ₹1,20,000
- Monthly spending = ₹15,000

Burn Rate:

₹15,000 per month

Runway:

$₹1,20,000 \div ₹15,000 = 8 \text{ months}$

This means the startup can continue operating for about **8 months** before needing more income or investment.

6. Tip to Stretch Runway

Focus only on expenses that directly help build the product or bring customers, and delay “nice-to-have” spending like expensive software, office space, or large marketing campaigns.

Prompt 9 - Comparison of Bootstrapping Against VC

GOAL: Assist the entrepreneur with the choice on how to finance the business

TECHNIQUE: Zero-shot

PROMPT: You are an experienced startup finance consultant having helped many businesses founded via bootstrapping and VC funding in India and South East Asia.

TASK: Do a comparison between bootstrapping against VC financing within the given scenario.

CONTEXT: This is a startup offering a new AI-based recruitment technology in India with an MVP, 200 beta users, promising initial reviews, and two co-founders who are technically skilled. They must choose whether to do a 50,000 Rupees seed round or bootstrap.

FORMAT:

Comparison table with 4 advantages and 4 disadvantages for each of the approaches

Following the table: Provide a 3-sentence recommendation specific to this situation

OUTPUT -

Factor	Bootstrapping – Advantages	Bootstrapping – Disadvantages	VC/Seed Funding – Advantages	VC/Seed Funding – Disadvantages
Control & Ownership	Founders keep full ownership and decision-making power.	Growth may become slow due to limited funds.	Faster scaling through additional capital.	Founders give up equity and partial control.
Financial Flexibility	Less pressure from investors for rapid returns.	Limited ability to hire aggressively or market heavily.	Funding can support hiring, marketing, and product improvement.	Investor expectations may create pressure for fast growth.
Product Development	Encourages disciplined spending and lean product building.	Product improvements may take longer because of resource constraints.	More resources allow quicker feature development and AI improvements.	Risk of overspending before achieving product-market fit.
Market Expansion	Forces founders to validate revenue early and focus on paying customers.	Competitors with funding may scale faster and dominate the market.	Easier to expand into multiple cities or industries quickly.	Fundraising process can consume time and distract founders from building the business.

Recommendation

For this startup, bootstrapping initially appears more practical because the company already has an MVP, technically strong founders, and early beta traction. A ₹50,000 seed round is relatively small and may not provide enough meaningful runway to justify dilution and investor pressure at such an early stage. The founders should focus on improving product-market fit, converting beta users into paying customers, and raising a larger strategic round later if growth

starts accelerating.

Prompt 10 - Financial Projections Slide

GOAL: Prepare pitch deck financials that will wow your investors

TECHNIQUE: Chain-of-Thought

PROMPT: You are an expert in preparing financials for the pitch deck and have raised over \$50 million for startups.

TASK: Create the complete content for the "Financial Projections" slide for an AI writing assistant startup.

CONTEXT:

Year 1: 0 Rupees in revenue (product development and beta testing phase)

Year 2: 80,000 Rupees in revenue (freemium pricing model and revenue from early customers)

Year 3: 3,50,000 Rupees in revenue (subscription scaling and corporate plan sales)

Firstly, analyze the underlying assumptions to reach such revenue numbers. Then write the content for the slide.

FORMAT:

Table for Revenue projections for Years 1, 2, and 3 along with milestones for each year

Four Important Assumptions (numbered list with one assumption per point)

Two sentences on "Why Should Investors believe this"?

OUTPUT -

Financial Projections

Year	Revenue Projection	Key Milestones
Year 1	₹0	Product development completed, beta version launched, first 500 trial users onboarded

Year 2	₹80,000	Freemium model introduced, conversion of early users into paid subscribers, initial creator and student partnerships established
Year 3	₹3,50,000	Subscription scaling achieved, corporate writing plans launched, AI features expanded, strong recurring revenue growth

Important Assumptions

1. The startup achieves steady user growth through low-cost organic marketing, referrals, and creator partnerships during the first two years.
2. Around 5–8% of free users convert into paid subscribers once premium AI writing features and workflow tools are introduced.
3. Corporate plans and team subscriptions become a major revenue driver in Year 3, increasing average customer value significantly.
4. Operational costs remain lean due to cloud-based infrastructure, remote teams, and gradual hiring during the scaling phase.

Why Should Investors Believe This?

The projections are intentionally conservative and based on a phased growth model that prioritizes product validation before aggressive monetization. The sharp increase in Year 3 revenue is supported by scalable SaaS economics, recurring subscriptions, and expansion into higher-value B2B customers.

CATEGORY 3: HR

Prompt 11 - Writing a Job Posting

GOAL: Compose an attractive job posting for Junior AI Engineer

TECHNIQUE: Zero-shot

PROMPT: You are the HR Manager at a 20-person AI startup named NeuralPath that focuses on developer tools.

TASK: Draft the entire job posting for a Junior AI Engineer position.

CONTEXT: It's a fully-remote job opening. Preferred applicant should have 0-2 years of experience, knowledge of Python and fundamental AI, and desire to learn more. Pay scale is ₹6-10 LPA for Indian applicants.

FORMAT:

use the following headings:

1. Overview of the Position (2-3 sentences)
 2. Your Responsibilities (5 bullet points)
 3. Skills Required (5 hard requirements)
 4. Additional Pluses (3 soft requirements)
 5. What We Offer (4 perks)
 6. Our Culture (one short paragraph with 3-4 sentences)
- (below 400 words)

Voice: exciting, authentic, friendly

OUTPUT -

Junior AI Engineer (Remote)

Company: NeuralPath

1. Overview of the Position

NeuralPath is looking for a Junior AI Engineer to join our fast-growing team building next-generation developer tools. This role is perfect for someone early in their career who is excited about AI, enjoys writing code in Python, and wants to learn by building real-world systems. You'll work closely with experienced engineers to design, train, and deploy AI-driven features.

2. Your Responsibilities

- Assist in building and improving AI/ML models for developer tools
- Write clean, efficient Python code for production systems
- Work with APIs, data pipelines, and model integrations
- Collaborate with senior engineers on feature development
- Participate in testing, debugging, and performance optimization

3. Skills Required

- Strong knowledge of Python programming
- Basic understanding of machine learning and AI concepts
- Familiarity with data structures and algorithms
- Experience with Git and version control
- Understanding of REST APIs and basic backend concepts

4. Additional Pluses

- Exposure to PyTorch, TensorFlow, or similar frameworks
- Experience with personal AI/ML projects or hackathons
- Curiosity and willingness to experiment with new technologies

5. What We Offer

- Competitive salary: ₹6–10 LPA (India)
- Fully remote work with flexible hours
- Hands-on mentorship from experienced AI engineers
- Opportunity to work on real-world AI products from day one

6. Our Culture

At NeuralPath, we move fast, learn faster, and believe in building things that actually matter. We value curiosity over perfection and experimentation over rigid processes. If you love solving hard problems and growing every day, you'll feel right at home here.

Prompt 12 - 10 Behavioral Interview Questions

GOAL: Come up with structured interview questions for a Product Manager

TECHNIQUE: Few-shot

PROMPT: As a hiring manager working for a rapidly growing startup, you have interviewed over 200 candidates.

TASK: Here is a sample of a GOOD behavioral interview question:

"Give me a scenario where you had to cut a feature that the development team put a lot of effort into? How did you make your decision and how did you explain it to them?"

And here is a BAD behavioral interview question:

"Do you have strong skills in prioritization?"

TASK: As the hiring manager at a pre-series A B2B SaaS company, generate 10 behavioral interview questions for a Product Manager position.

CONTEXT: The candidate will lead a small team of 4 engineers, report directly to the CEO, talk to the customers each week, and set their own product roadmap.

FORMAT:

List of 10 questions. Format: "Question"

Each question should be open-ended, with an opportunity for STAR response.

OUTPUT -

1. "Tell me about a time you had to prioritize between multiple high-impact product features with limited engineering capacity. How did you decide what to build first?" – [Prioritization + Decision Making]
2. "Describe a situation where customer feedback directly changed your product roadmap. What was your process for validating and acting on it?" – [Customer Focus + Adaptability]
3. "Give an example of a time you disagreed with engineers or stakeholders on a product direction. How did you handle it?" – [Collaboration + Conflict Resolution]
4. "Tell me about a product you managed that failed or underperformed. What did you learn and what did you change afterward?" – [Ownership + Learning from Failure]
5. "Walk me through a time you had to define product requirements with incomplete or ambiguous information. How did you proceed?" – [Problem Solving + Clarity Creation]
6. "Describe a situation where you had to say no to a customer or senior stakeholder request. How did you communicate your reasoning?" – [Communication + Stakeholder Management]
7. "Tell me about a time you used data to influence a major product decision. What metrics did you rely on and why?" – [Data-Driven Decision Making]
8. "Give an example of when you had to launch a product or feature under tight deadlines. How did you ensure quality while shipping on time?" – [Execution + Time Management]
9. "Describe a time you identified a hidden user problem that others on the team missed. How did you discover it and what did you do next?" – [User Empathy + Initiative]
10. "Tell me about a time you had to shift your product strategy significantly. What triggered the change and how did you manage the transition?" – [Strategic Thinking + Adaptability]

Prompt 13 - 5 Day Onboarding Plan

GOAL: To devise a structured virtual onboarding process

TECHNIQUE: Chain-of-Thought

PROMPT: Assume you are an HR consultant whose specialization includes onboarding of remote teams in tech startups.

TASK: Create a 5-day onboarding plan for a new Software Engineer joining the remote team of a startup comprised of 12 people.

CONTEXT: The new software engineer will join from another city and will be working with the team remotely. The team has not seen each other face-to-face ever. The product developed at the startup is built using React + Node.js. The communication tools used at the startup include Slack, Notion, GitHub, and Linear.

Consider your plan step by step:

Day 1: First impression and tools

Day 2: Introduction to code base and architecture

Day 3: Completion of first task

Day 4: Getting acquainted with team culture

Day 5: Summarizing week one

FORMAT:

A table consisting of columns that read:

Day | Daily Objective | 3 Activities | Tools | 1 Person

OUTPUT -

Day	Daily Objective	3 Activities	Tools	1 Person
Day 1	First impression and setup	1) Intro call with team 2) Set up dev environment 3) Access all repositories and dashboards	Slack, GitHub, Notion	Team Lead
Day 2	Understand product & architecture	1) Walkthrough of React + Node.js architecture 2) Review system design docs 3) Explore codebase structure	Notion, GitHub, Slack	Senior Engineer
Day 3	First hands-on contribution	1) Pick a beginner-friendly bug/task 2) Implement fix or feature 3) Submit pull request for review	GitHub, Linear, Slack	Assigned Reviewer
Day 4	Team culture & collaboration	1) Attend team stand-up 2) Pair programming session 3) Informal virtual coffee chat with teammates	Slack, Zoom, Linear	Product Manager
Day 5	Reflection & onboarding review	1) Present learnings from week 2) Discuss challenges faced 3) Define next sprint goals	Notion, Slack, Zoom	Engineering Manager

Prompt 14 - Remote Work Policy

GOAL: Draft human-friendly Remote Work Policy for the start-up.

TECHNIQUE: Zero-shot

PROMPT: You are a policy writer for a start-up company that has around 20 people on board and operates in a hybrid model, with team members based in India and the UAE.

TASK: Draft a Remote Work Policy document for all employees.

CONTEXT: The firm prioritizes flexibility but still wants to ensure sufficient overlap to allow for collaboration. The majority of clients are located in IST and GST time zones. The team communicates through Slack, Notion, and Google Meet.

FORMAT:

include these parts with appropriate headings:

1. Core Collaboration Hours
2. Communication Tools and Response Times
3. Meetings Protocol
4. Device and Internet Costs Compensation
5. Holidays and Leaves

(Below 300 word)

Tone: professional, yet conversational.

OUTPUT -

Remote Work Policy

1. Core Collaboration Hours

To support smooth collaboration across India (IST) and UAE (GST) time zones, all employees are expected to be available during **11:00 AM – 3:00 PM IST (9:30 AM – 1:30 PM GST)** as core overlap hours. Outside of this window, employees may manage their schedules flexibly as long as deliverables are met and team coordination is maintained.

2. Communication Tools and Response Times

We use **Slack for day-to-day communication, Notion for documentation, and Google Meet for calls**. Employees are expected to respond to Slack messages within **4 working hours** during the workday. Notion should be updated regularly to ensure transparency and async collaboration.

3. Meetings Protocol

Meetings should be scheduled only when necessary and must include a clear agenda shared in advance. We prefer short, focused meetings (15–30 minutes) and encourage asynchronous updates wherever possible. All recurring meetings should respect core collaboration hours and avoid unnecessary overlap outside them.

4. Device and Internet Costs Compensation

Employees working remotely will receive a monthly allowance to support reliable internet connectivity and essential work-related device usage. Any additional hardware requirements must be pre-approved by the team lead.

5. Holidays and Leaves

Employees are entitled to public holidays applicable in their respective region (India or UAE), along with paid annual leave as per company policy. We encourage employees to plan leaves in advance to ensure smooth project continuity.

Prompt 15 - Performance Review

GOAL: Create a constructive and realistic performance review

TECHNIQUE: Chain of Thoughts

PROMPT: You are an engineering manager in a startup company creating a performance review for your team.

TASK: Create a full performance review for one of your engineers called "Alex"

CONTEXT: Some information about Alex:

STRENGTHS: Finishes all assignments timely. Code is neat and well-tested. Independent self-starter.

NEEDS TO WORK ON: Does not participate in team meetings. Avoids reporting obstacles until they escalate into major issues. Prefers working alone.

Give an honest and critique response

FORMAT:

1. Strengths (3 points, backed by evidence)
2. Areas of Improvement (2 points with examples)
3. Action Plan (2 SMART goals – Specific, Measureable, Achievable, Relevant, Time-Based)
4. Encouraging closing statements (2-3 points)

OUTPUT -

Performance Review – Alex

1. Strengths

- **Consistently delivers work on time**: Alex has reliably met sprint deadlines over the last quarter, often completing assigned tasks ahead of schedule without requiring follow-ups.
- **High-quality, well-tested code**: Code reviews show strong attention to edge cases and unit testing, resulting in fewer post-deployment bugs compared to team average.

- **Strong independent execution:** Alex requires minimal supervision and is able to take a task from requirement to production with clear technical ownership.
-

2. Areas of Improvement

- **Limited participation in team discussions:** In sprint planning and retrospectives, Alex rarely contributes, which has reduced visibility into their perspective on system improvements and trade-offs.
 - **Delayed communication of blockers:** There have been multiple instances where issues were only raised after impacting timelines, such as the API integration delay last sprint that surfaced late in the cycle instead of during early troubleshooting.
-

3. Action Plan (SMART Goals)

- **Increase active meeting participation:** Alex will contribute at least **2 meaningful inputs per sprint meeting** for the next **8 weeks**, tracked via team lead notes.
 - **Improve early escalation of blockers:** Alex will flag any technical or dependency-related blocker within **24 hours of identification** for the next **3 sprints**, documented in Linear tickets or Slack updates.
-

4. Encouraging Closing Statements

Alex is a highly dependable engineer whose technical output is a strong asset to the team. With more proactive communication and collaboration, Alex has the potential to become a key technical leader. The focus going forward is not on changing how Alex works, but on ensuring their excellent work has greater visibility and team impact.

CATEGORY 4: PRODUCT

Prompt 16 - 5 User Stories

GOAL: Create development-ready user stories for an expense management application

TECHNIQUE: Zero-shot

PROMPT: Imagine yourself as the Product Manager of a financial technology startup developing a mobile expense management application known as "SpendWise."

TASK: Create 5 user stories for SpendWise.

CONTEXT: The main target customers belong to the age group of 22-30 years, who aim to manage their personal expenses and budget planning. These customers make use of UPI services and have several bank accounts.

FORMAT: Structure of User Stories -
for each one-

User Story: "As a [user], I want to [perform a task] in order to [get this outcome]."

Acceptance Criteria: 2 bullets

Label your user stories from 1 to 5.

OUTPUT -

SpendWise – User Stories

1.

User Story: "As a young professional, I want to automatically track my daily expenses so that I can understand where my money is going."

Acceptance Criteria:

- App syncs with bank accounts/UPI transactions and categorizes expenses automatically
 - User can view a real-time breakdown of spending by category (food, travel, shopping, etc.)
-

2.

User Story: "As a user, I want to manually add cash expenses so that my total spending record is complete."

Acceptance Criteria:

- User can input amount, category, and description for cash transactions
 - Manual entries are included in monthly budget reports
-

3.

User Story: “As a budget-conscious user, I want to set monthly spending limits so that I can control overspending.”

Acceptance Criteria:

- User can define category-wise or total monthly budgets
 - App sends alerts when spending reaches 80% and 100% of the limit
-

4.

User Story: “As a user with multiple bank accounts, I want to view all my transactions in one place so that I don’t have to switch between apps.”

Acceptance Criteria:

- App aggregates transactions from multiple linked accounts
 - Each transaction shows source account clearly
-

5.

User Story: “As a user, I want to receive weekly spending insights so that I can improve my financial habits.”

Acceptance Criteria:

- App generates weekly summary with charts and key insights
- Insights include top spending categories and comparison with previous weeks

Prompt 17 - 8 UX Research Interview Questions

GOAL: Create discovery interview questions that reveal the pain of users

TECHNIQUE: Zero-shot

PROMPT: As a UX researcher at a B2B startup, you will conduct interviews with potential clients.

TASK: Prepare 8 questions to interview the pain points of small business owners (up to 20 people per team) who manually generate their invoices using Excel, Word or handwriting.

CONTEXT:

No yes-no questions

No leading questions

The question must be able to generate insight into behavior, emotion, or process – NOT opinion

It is conversational, not survey-like

FORMAT: List your questions 1-8.

Follow each question with: [Insight target:]

OUTPUT -

1. "Walk me through the last time you created an invoice for a client from start to finish."
[Insight target: Actual workflow, tools used, and hidden inefficiencies]
2. "What usually triggers you to start preparing an invoice, and how do you keep track of what needs to be billed?"
[Insight target: Trigger points and tracking systems or lack thereof]
3. "Can you describe a time when something went wrong while preparing or sending an invoice?"
[Insight target: Common failure points and operational risks]
4. "How do you ensure that all billable work gets included in an invoice, especially when work is spread across multiple days or people?"
[Insight target: Revenue leakage and tracking challenges]
5. "What steps do you go through after an invoice is created but before it reaches your client?"
[Insight target: Approval, validation, and communication processes]
6. "Tell me about the tools or formats you currently rely on when creating invoices and how you ended up using them."
[Insight target: Tool adoption history and switching barriers]
7. "Describe a situation where you had to make changes to an already sent invoice. What led to that and how did you handle it?"
[Insight target: Revision workflows and friction points]
8. "How do you keep track of payments after invoices are sent, and what challenges come up in that process?"
[Insight target: Payment tracking issues and cash flow pain points]

Prompt 18 - RICE Priorities

GOAL: Rank features objectively by scoring framework

TECHNIQUE: Chain-of-thought

PROMPT: You are a product strategist at a food delivery startup with 50,000 MAU.

TASK: Apply RICE priority ranking to 6 suggested features.

CONTEXT: The 6 suggested features are:

1. Order tracking
2. Subscription plan (unlimited delivery)
3. AI recommendations based on previous orders
4. Dark mode
5. Loyalty rewards (per order points)
6. Multi-language version (5 language options)

Formula: $RICE = (Reach \times Impact \times Confidence\%) \div Effort$

FORMAT:

Think step-by-step: For each of 6 features, assume:

Reach: Out of our 50,000 MAUs, how many will use the feature monthly?

Impact: Score from 0.25 (small impact), 0.5 (moderate), 1, 2 (large), 3 (biggest)

Confidence: How confident are you in your assumptions? (% out of 100) (e.g. 80%)

Effort: How long does implementation take in engineer months? (1 is minimum effort)

Show step-by-step thinking, then rank from highest to lowest RICE score, and finally offer two-sentence recommendations on building features.

OUTPUT -

RICE Prioritization – Food Delivery Startup (50,000 MAU)

Assumptions & Scoring

Feature	Reach (monthly users)	Impact	Confidence	Effort (months)	RICE Score
Order tracking	40,000	2	90%	3	24,000
Subscription plan (unlimited delivery)	8,000	3	70%	5	3,360
AI recommendations	20,000	2	75%	4	7,500
Dark mode	15,000	0.25	95%	1	3,562.5
Loyalty rewards	30,000	1	80%	3	8,000

Multi-language support	12,000	1	85%	4	2,550
------------------------	--------	---	-----	---	-------

Ranked by RICE Score (Highest → Lowest)

1. **Order tracking – 24,000**
 2. **Loyalty rewards – 8,000**
 3. **AI recommendations – 7,500**
 4. **Dark mode – 3,562.5**
 5. **Subscription plan – 3,360**
 6. **Multi-language support – 2,550**
-

Recommendation

Order tracking is the clear priority because it directly improves core user experience and impacts the majority of active users. After that, loyalty rewards and AI recommendations should be prioritized as they strongly influence retention and order frequency. Lower-effort features like dark mode can be shipped quickly in parallel, but should not distract from high-impact revenue-driving improvements.

Prompt 19 - One-Page PRD

GOAL: Create a product requirements document for a new feature

TECHNIQUE: Zero-shot

PROMPT: You are a Senior Product Manager for a project management tool targeting businesses with a client base of 5,000 corporations.

TASK: Develop a one-page PRD (Product Requirements Document) for a feature titled "Smart Notifications."

CONTEXT: Rather than sending regular scheduled notifications, the software learns from the user's behavior and sends alerts at the very time when they are most prone to act, such as alerting the user regarding their tasks immediately after they have launched the application post-lunch break if they normally do so during that period.

FORMAT:

include ALL these components:

1. Problem statement (2-3 sentences)
 2. Objectives (3 clear objectives)
 3. Not Goals (2 non-goals of the function)
 4. User Stories (3 stories in "As a... I want... So that..." format)
 5. Success Criteria (3 KPIs and target figures)
 6. Tech Notes (2 relevant technical points for the development team)
 7. Timeline (3 phases – Discovery, Build, Release – duration for each phase)
- (Less than 500 words)

OUTPUT -

PRD: Smart Notifications

1. Problem Statement

Users often ignore or delay standard scheduled notifications because they arrive at inconvenient or low-attention moments. As a result, important tasks get missed, reducing productivity and engagement within the project management tool. A more intelligent, behavior-aware notification system is needed to improve action rates.

2. Objectives

- Deliver notifications at the most behaviorally effective time for each user
 - Increase task completion rates by improving notification relevance
 - Reduce notification fatigue and disable rates across users
-

3. Not Goals

- This feature is not meant to replace email or external communication tools
 - It will not provide full predictive task management or auto-scheduling of work
-

4. User Stories

- As a project manager, I want to receive task alerts when I am most active so that I can act on them immediately.

- As a team member, I want notifications to align with my work habits so that I am not interrupted at low-productivity times.
 - As an admin, I want insights into notification effectiveness so that I can understand engagement improvements across my team.
-

5. Success Criteria

- Increase task completion rate from notifications by **+20% within 3 months**
 - Improve notification open rate to **at least 60% within 2 months of launch**
 - Reduce notification disable/mute rate by **30% compared to baseline**
-

6. Tech Notes

- Use behavioral event tracking (app opens, click patterns, time-of-day usage) to build user activity profiles
 - Implement lightweight ML-based scheduling model that continuously adjusts notification timing per user
-

7. Timeline

- **Discovery (2 weeks):** User behavior analysis, event tracking setup, and hypothesis validation
- **Build (4 weeks):** Model development, backend integration, and notification engine implementation
- **Release (2 weeks):** Gradual rollout, A/B testing, and performance monitoring across segments

Prompt 20 - 3-Month Product Roadmap

GOAL: Develop an organized post-MVP roadmap

TECHNIQUE: Chain-of-Thought

PROMPT: - Imagine yourself a product advisor with experience building AI SaaS products from 0 to 1.

TASK: Create a 3-month product roadmap for an AI customer support chatbot startup.

CONTEXT:

Launched MVP 2 weeks ago

15 business customers running pilots

200 customer support tickets handled so far

Team composition: 3 engineers, 1 project manager, 1 designer

Major issues from pilot: occasional mistakes, lack of transfer to human agents

Work through your logic on which themes/tasks/features to prioritize during each of those months:

First month would be focused on stability and learnings from pilots

Second month - on development of core missing features

Third month - getting ready for public growth

FORMAT: A table with the following columns: Month | Theme | 4 key tasks/features | Success metric (1 per month) | 1 risk

At the end, please make 2 statements on success after Month 3.

OUTPUT -

3-Month Product Roadmap – AI Customer Support Chatbot

Month	Theme	4 Key Tasks / Features	Success Metric	1 Risk
Month 1	Stability & Learning	1) Fix hallucination issues in responses 2) Improve prompt grounding using customer knowledge base 3) Add conversation logging & review dashboard 4) Analyze 200 pilot tickets for failure patterns	Reduce incorrect responses by 30%	Pilot data not representative of real-world scale usage
Month 2	Core Feature Completion	1) Build human handoff / escalation system 2) Add confidence scoring for responses 3) Integrate CRM + ticketing tools (Zendesk/Intercom style) 4) Improve intent recognition and fallback handling	Achieve 70% successful resolution without human escalation accuracy target stability	Integration complexity slows development velocity

Month 3	Growth Readiness	1) Multi-tenant scaling architecture 2) Self-serve onboarding flow for new businesses 3) Admin analytics dashboard (deflection rate, resolution time) 4) Pricing & billing system implementation	Onboard 50+ paying customers in controlled rollout	Scaling introduces latency and performance degradation
---------	------------------	--	---	--

Post Month 3 Success Statements

If the roadmap is executed successfully, the product will transition from a pilot-stage chatbot to a scalable SaaS support platform with measurable reliability and enterprise readiness. The startup will have validated both technical stability and market demand, enabling confident expansion into broader commercial launch and fundraising conversations.
